## 1 M-Bus M module

### 1.1 Function

General Properties of the M-Bus module: Functions		
Characteristic	value	reference
protocol	wired M-Bus	EN13757
transmission speeds	300, 2400 and 9600 bps	
Automatically speed recognition	yes	
Compatibility with sen sonic II	restricted	
Telegram-Format	Short and standard telegrams	Chapter 3
Module commissioning & configuration	PDA / tablet Device UI	
update	Gathering measurement data	M bus with every M-Bus readout
max. number and readings per day at during walking		<ul style="list-style-type: none"> <li>Short telegram: 122 (<math>\varnothing</math> Interv.: 12 mins)</li> <li>Standard telegrams: 21 (<math>\varnothing</math> interval: 69 min)</li> <li>Short telegram fast<sup>1)</sup>: 1440 (<math>\varnothing</math> interval: 1 min)</li> </ul>
max. number and readings per day at viauspicious interrupted bus voltage supply		<ul style="list-style-type: none"> <li>Short telegram: 70 (<math>\varnothing</math> interval: 21 min)</li> <li>Standard telegrams: 20 (average interval: 72 minutes)</li> <li>Short telegram fast<sup>1)</sup>: 412 (<math>\varnothing</math> interval: 3.5 min)</li> </ul>
smallest off reading interval	1s	

Table 1: General properties of the M-Bus module

- This operating mode reduces the service life of the sen sonic 3 to approx. 7 years (the operating mode is activated via the bit "0x10=IncreasedOpticalCredit" in the data object "Mbus:AccessRight (3.4.1.10)"; activation is carried out at the next change of day; instead of "OpticCreditDailyInc (10.7.1.2) then "OpticCreditDailyIncExt" (10.7.1.3) is used as daily budget for optical communication).
- The specified intervals are only calculated average values, the readings can also be used up directly one after the other without a break.

Devices-	mistake	transport layer	application layer
bit0	"F" (pulse incr)	bit4: temporary error	bit0: "F" (pulse incr)
bit1	"c" (calculation)	bit4: temporary error	bit1: "c" (calculation)
bit2	"t" (temperature)	bit4: temporary error	bit2: "t" (temperature)
bit3	"F" (volume)	bit4: temporary error	bit3: "F" (volume)
bit4	"L" (lifetime)	bit2: energy low bit3: permanent error	bit4: "L" (lifetime)
bit5	"U" (unsealed)	bit3: permanent error	bit5: "U" (unsealed)
bit6	"SysErr" (FRAM)	bit3: permanent error	bit6: "SysErr" (FRAM)
bit7	"SysErr" (MetChecksum)	bit3: permanent error	bit7: "SysErr" (MetChecksum)

Table 2: Mapping device to M-Bus error

Characteristic	parameter	value
electricity	Supported M-Bus voltage	20 .. 45 V
	power supply	only from the M-Bus network, no battery supply
	maximum power consumption	≤1.5 mA (1 unit load)

**Table 3:** Electrical properties of the M-Bus module

## 1.2 Addressing

### 1.2.1 Primary Addressing

Each device connected to the M-Bus has a 1-byte, unique address from the number range 0 to 250, with which it can be specifically addressed.

In production, the primary address is set to "0", in the field it can then be set to an address from the range 0 to 250 via M-Bus, radio or the device user interface. Addresses 251-255 are reserved and must not be used as device addresses.

This results in the following primary address scheme:

address	Device response to requests to the address	meaning
0	Delivery status of the primary address	"not set"
0 - 250	Only the device with this address processes and answers the request	device address
251 (0xFB)	Requests to these addresses will not be answered by any device	
252 (0xFC)		
253 (0xFD)	Requests to this address will be answered to devices previously sent via "secondary address" (see below) and were restrained	- reserved -
254 (0xFE)	Requests to this address will be processed and answered using the primary address of the responding G device contains	
255 (0xFF)	inquiries to this address processed but not answered	

**Table 4:** M-Bus device primary address scheme

### 1.2.2 p esecondary addressing

The sen sonic 3 devices are selected and addressed as in the M-Bus specification DIN EN 13757-3 Chapter 11.3ff. The secondary address is appropriate the M-Bus specification is structured as follows:

byte	length	e data type	value	reference
0 .. 3	4 bytes	Serial number of the main device (8-digit BCD, M-Bus Type A format)		EN1375-3 Appendix A
4th 5th	2 bytes	manufacturer code	0x2674 for "ACTUAL"	
		Version code: sen sonic 3 sen sonic 3 calculator flow sensor		
6	1 byte		0xA9 0xAA 0xAC	

byte length	data type	value	R reference
	ista P4.0 – 51099	0xAD	
7	1 byte device type code		- Table 6: Gdevice type Cor

**Table 5:** Structure of M-Bus secondary address

As in the M-Bus specification [DIN EN 13757-7:2018, chapter 7.5.4 the "Identification of device type"] each device type is assigned according to the following scheme:

sen sonic 3 variant	medium	mounting location	device type code
sen sonic 3 & sen sonic 3 calculator <sup>1)</sup>	warmth	return	0x04
		leader	0x0C
	cold	return	0x0A
		leader	0x0B
flow sensor	Hybrid	-	0x0D
ista P4.0 – 51099	-	-	0x04
ista P4.0 – 51099	any	-	freely programmable, Delivery status = 0x00

**Table 6:** device type code

<sup>1)</sup>With sen sonic 3 calculator TX with config. Installation location, the device type code is only set when configuring the installation location field laid

## 2 Changeover of the working mode (selection of telegrams)

CS – checksum

PB - primary bus address

Switching to standard telegram mode: 3 response telegrams:

- 68 04 04 68 73 PB **5000**CS              or
- 68 04 04 68 73 PB **5300**CS "00"  
means send all data

Switching to short telegram mode: 1 response telegram:

- 68 04 04 68 73 PB **5050**CS 68              or
- 04 04 68 73 PB **5350**CS  
"50" means sending instantaneous values (for controls).

### 3 sensoric 3 Telegram-I nhold

#### 3.1 Ku doctor telegram

Suitable for readings in short time interval a(15 min, 30 min, 30 min, etc.). It will be 102 bytes tes to FDH and Dat en in 12 data points transferred.
